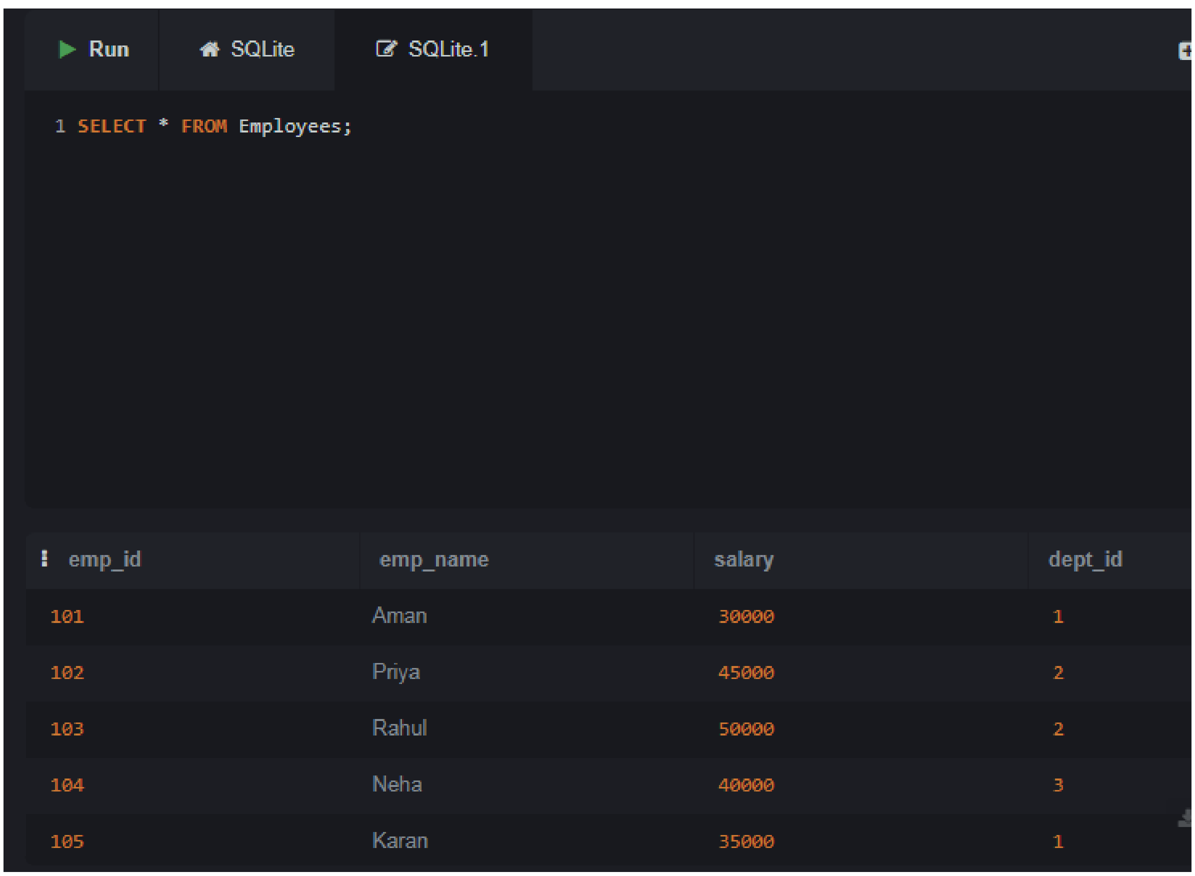
Task 7: SQL Queries for Data Extraction

Objective:
To learn SQL data extraction using SELECT queries, JOIN operations, and GROUP BY aggregation.

Tools Used:
SQLite Online

Database Tables:
1. Departments
2. Employees

Queries Performed:
1. SELECT Query
2. WHERE Clause
3. INNER JOIN
4. GROUP BY with AVG()
5. COUNT()
6. Department



```sql
SELECT * FROM Employees;
```

emp_id	emp_name	salary	dept_id
101	Aman	30000	1
102	Priya	45000	2
103	Rahul	50000	2
104	Neha	40000	3
105	Karan	35000	1

Run | SQLite | SQLite.1

```sql
SELECT * FROM Employees
WHERE salary > 40000;
```

emp_id	emp_name	salary	dept_id
102	Priya	45000	2
103	Rahul	50000	2

Run | SQLite | SQLite.1

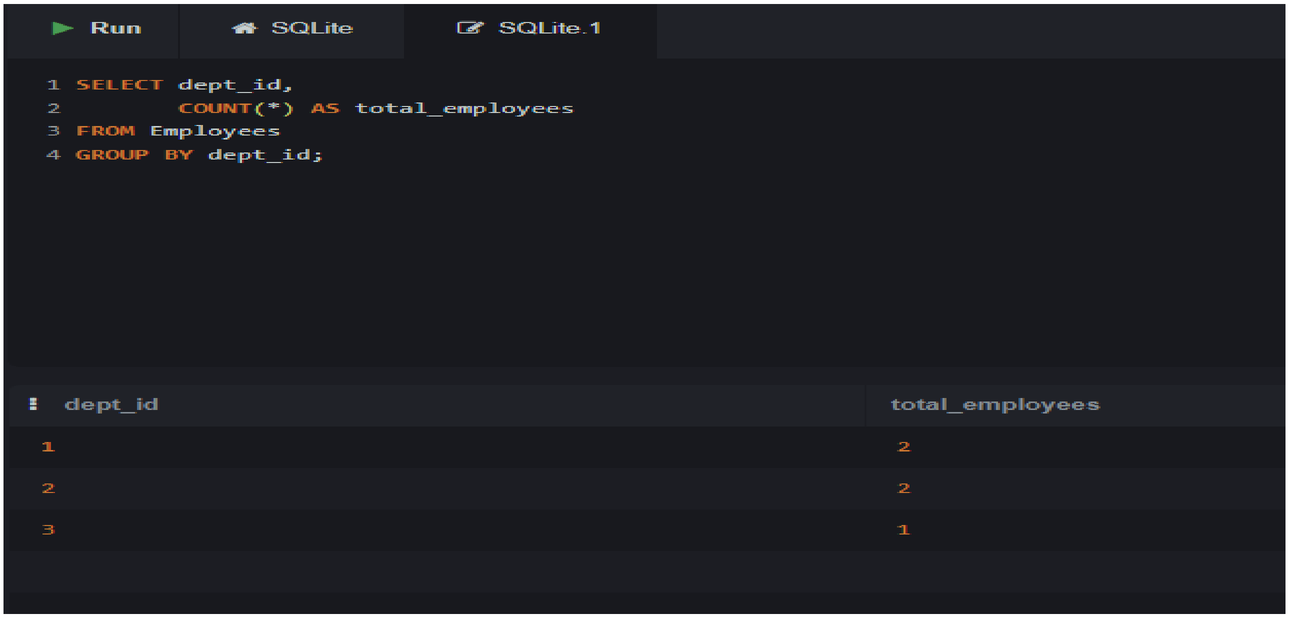
```sql
SELECT e.emp_name,
       d.dept_name,
       e.salary
FROM Employees e
INNER JOIN Departments d
ON e.dept_id = d.dept_id;
```

emp_name	dept_name	salary
Aman	HR	30000
Priya	IT	45000
Rahul	IT	50000
Neha	Finance	40000
Karan	HR	35000

Run | SQLite | SQLite.1

```sql
SELECT * FROM Employees
WHERE salary > 40000;
```

emp_id	emp_name	salary	dept_id
102	Priya	45000	2
103	Rahul	50000	2



Results:
(Add all screenshots here)

Conclusion:
Successfully extracted and analyzed data from a relational database using SQL queries.
