

Task 7: SQL Queries for Data Extraction

Objective:

To learn SQL data extraction using SELECT queries, JOIN operations, and GROUP BY aggregation.

Tools Used:

SQLite Online

Database: Departments Table

Employees Table

Queries Performed:

1. SELECT Query

Retrieved all employee records.

2. WHERE Clause

Filtered employees with salary greater than 40000.

3. INNER JOIN

Combined Employees and Departments tables to display employee names, department names, and salaries.

4. GROUP BY with AVG()

Calculated average salary for each department.

5. COUNT()

Counted total employees in each department.

Results:

(Insert screenshots of query outputs here)

Conclusion:

Successfully created tables, inserted data, performed data extraction, joined tables, and generated aggregated results using SQL.
